🏥 DIABETES MEDICAL REPORT

👤 Patient Information

- **Name:** Amit Verma
- **Age:** 48 years
- **Gender:** Male
- **Date of Report:** 20 March 2026
- **Patient ID:** DM-2026-014

🩺 Chief Complaints

- Frequent urination (especially at night)
- Increased thirst
- Unexplained weight loss
- Fatigue and weakness
- Blurred vision

📊 Vital Signs

- **Blood Pressure:** 145/92 mmHg
- **Heart Rate:** 84 bpm
- **BMI:** 29.2 (Overweight)

🧪 Laboratory Investigations

Test	Result	Normal Range
Fasting Blood Glucose	168 mg/dL	70–100 mg/dL
Postprandial Glucose	256 mg/dL	<140 mg/dL
HbA1c	8.5%	<5.7%

Test	Result	Normal Range
Serum Insulin	Low	Normal
Total Cholesterol	220 mg/dL	<200 mg/dL
LDL Cholesterol	140 mg/dL	<100 mg/dL
HDL Cholesterol	38 mg/dL	>40 mg/dL

🧠 **Diagnosis**

- **Type 2 Diabetes Mellitus (Uncontrolled)**
- **Hypertension (Stage 1)**
- **Dyslipidemia**

💊 **Prescribed Medications**

- **Metformin 500 mg** – Twice daily after meals
- **Glimepiride 1 mg** – Once daily before breakfast
- **Atorvastatin 10 mg** – Once daily at bedtime
- **Telmisartan 40 mg** – Once daily

🥗 **Lifestyle Recommendations**

- Follow a **low carbohydrate, high fiber diet**
- Avoid sugary foods, soft drinks, and processed items
- Engage in **30–45 minutes of brisk walking daily**
- Maintain proper hydration
- Monitor blood glucose regularly

⚠️ **Risk Factors**

- Sedentary lifestyle
- Family history of diabetes

- Obesity
- Poor dietary habits

🔍 Doctor's Notes

The patient shows **poor glycemic control** with elevated HbA1c levels. Immediate lifestyle modification along with strict adherence to medication is advised. Risk of complications such as neuropathy, nephropathy, and retinopathy if uncontrolled.

📅 Follow-up Plan

- Review after **3 months**
- Repeat HbA1c test
- Monitor fasting and postprandial glucose weekly

👨‍⚕️ Doctor Details

- **Doctor Name:** Dr. Rakesh Sharma
- **Specialization:** Endocrinologist
- **Hospital:** Apollo Care Clinic
